MOTOLUX

Motorized Remote Controlled Lighting

2017
Innovation Award
ARCHITECTURE + PRESENTATION

WINNER 1

formalighting

Pan, Tilt, Adjust Beam Angle

No Ladders or Lifts Required

Moto - Zero

formalighting

A woman with dark hair and bangs, wearing a dark top, is shown in profile from the waist up. She is looking upwards and to the right at a large digital display mounted on a wall. The display shows a vibrant, abstract artwork with yellow and orange shapes on a green background. The room is dimly lit, with the primary light source being the display itself. Other similar displays are visible in the background, slightly out of focus.

numerous advantages of MOTOLUX include :

time and cost savings

safety

(as no need to climb ladders or mechanical lifts/
scaffolding to re-orient fixtures)

direct creative control

for revising seasonal and ambient lighting effects

MOTOLUX

Motorized Remote Controlled Lighting

TYPES OF CONTROL

RADIO SIGNAL IR
“LASER DIM”

**BLUETOOTH
LOW ENERGY**
APP CASAMBI

DMX

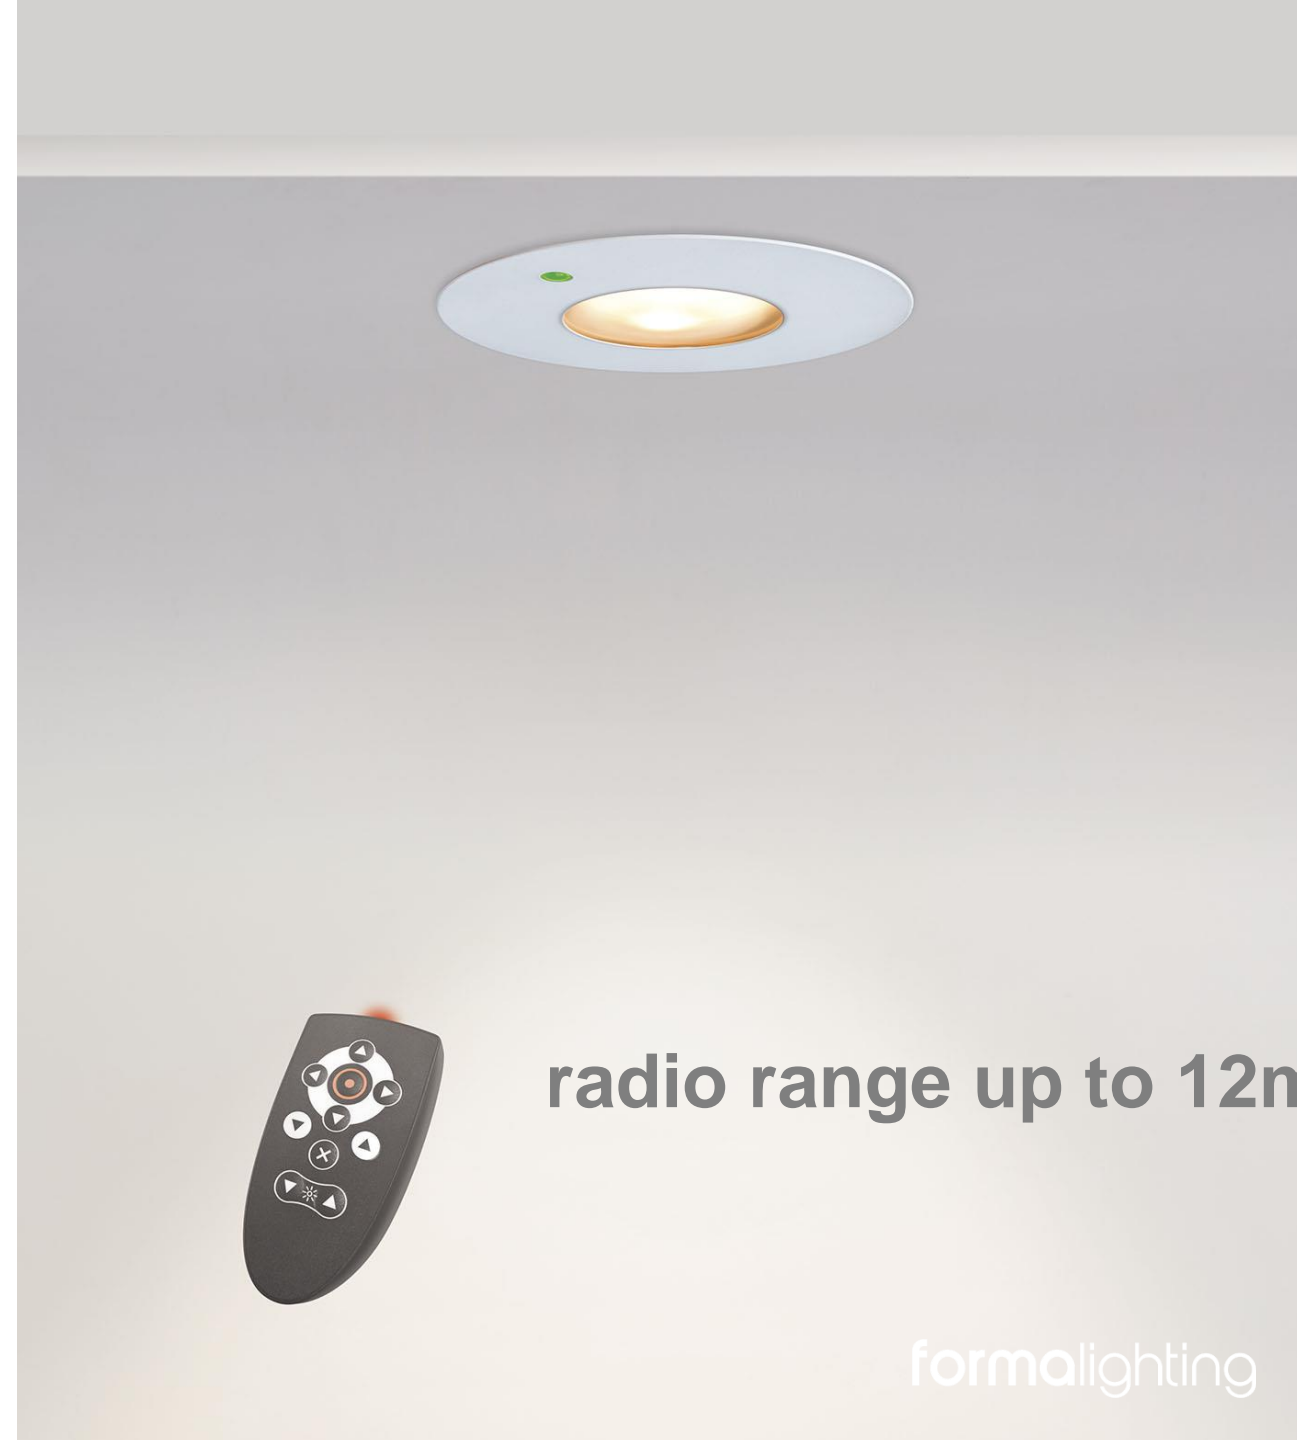

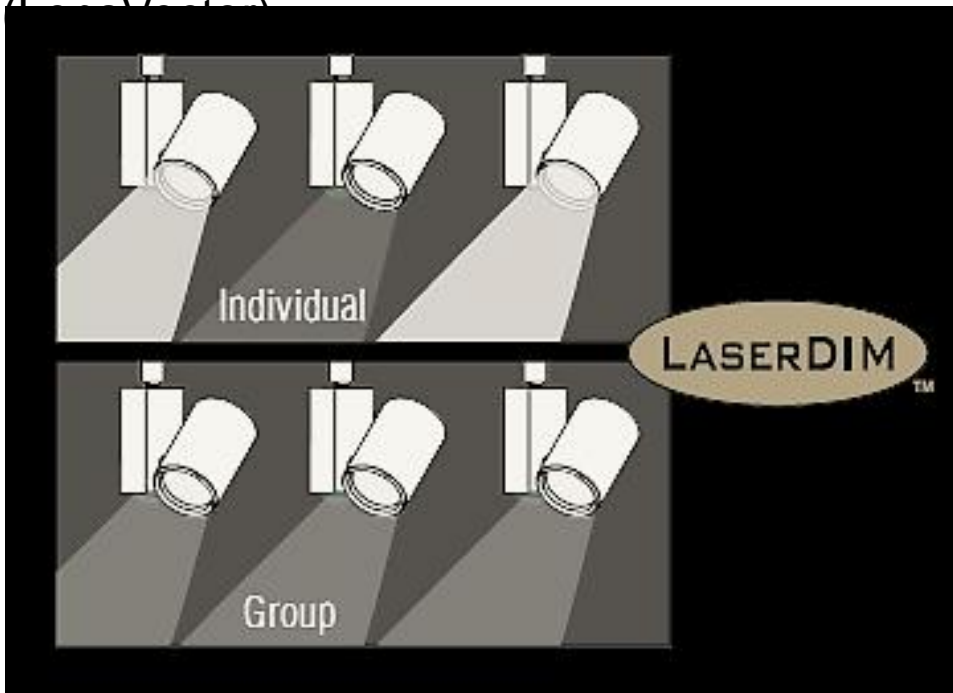

LASER DIM

the patented MOTOLUX remote control allows

to control the movements of the fixtures, as well to adjust the intensity and the white colour tuning of the light.

And also to shape a beam angle

(focus/spot)

radio range up to 12m

formalighting

CASAMBI

The Casambi devices are smart on their own and only connected when needed.

An Internet connection is not necessary, It is only needed for user interface configurations to be sent or recalled from the cloud service.

MESH

An Internet connection is not necessary, It is only needed for user interface configurations to be sent or recalled from the cloud service.

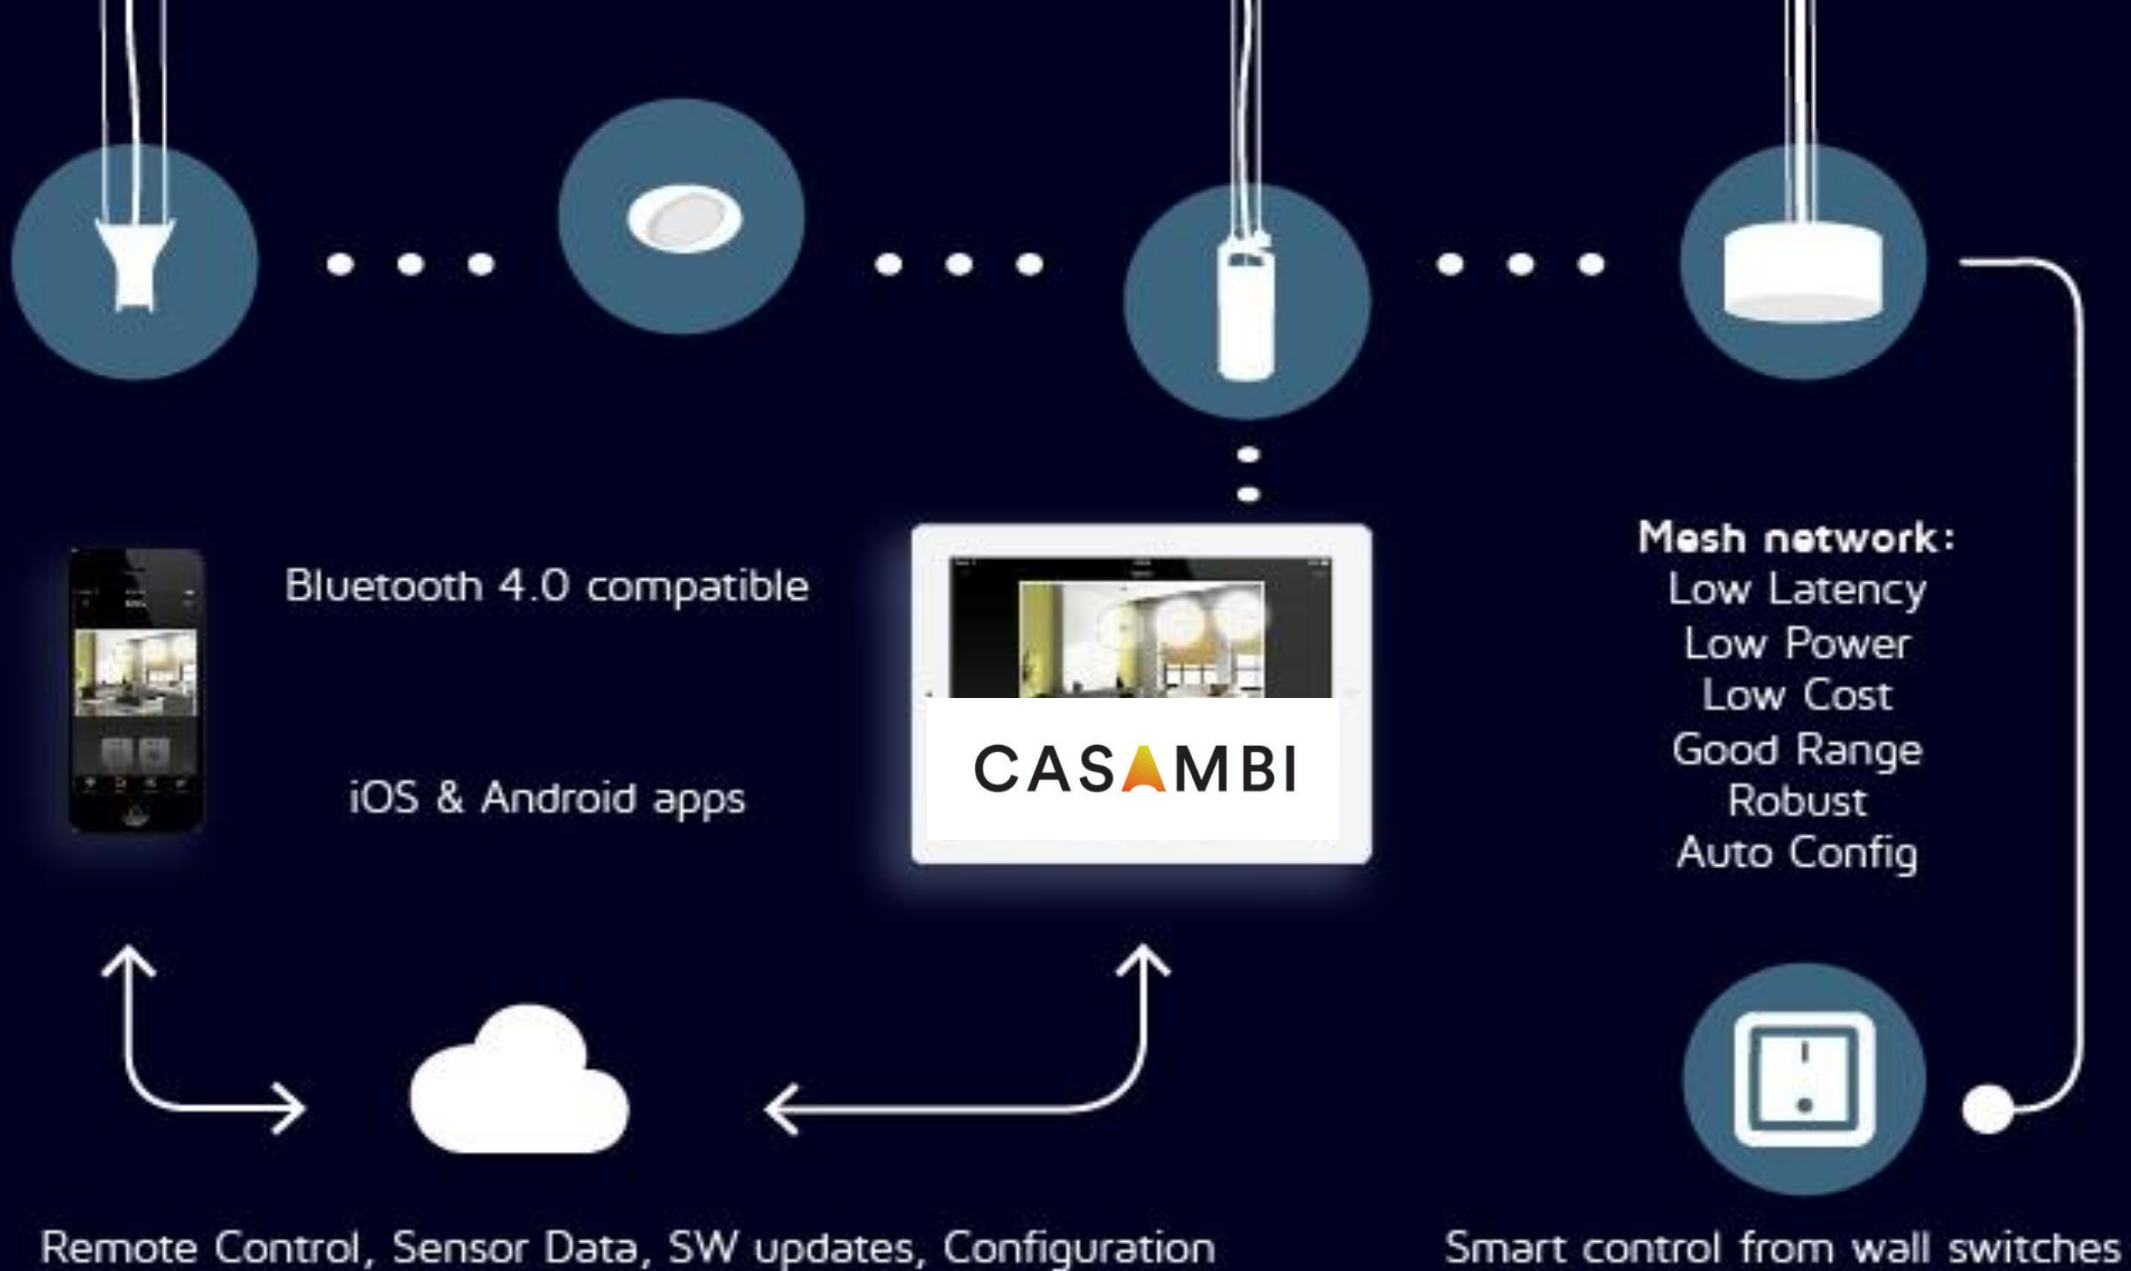

The Casambi system is scalable and is suited equally well for small one room solutions as for big building complexes.

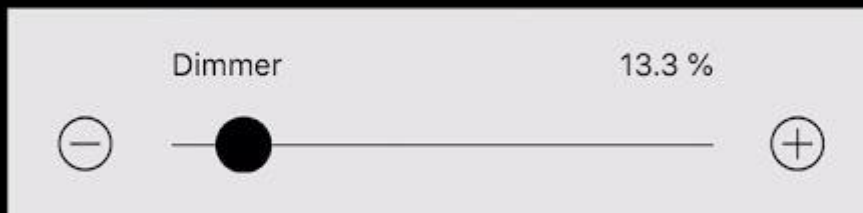

radio range up to 20m

BEAM SHAPE REGULATION

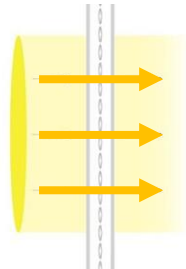

LENS VECTOR liquid crystals tecnology

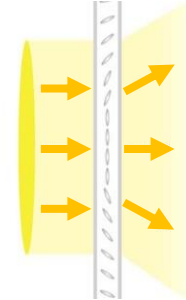

By managing the electric field and the orientation of the liquid crystal molecules, it is possible to model the light beam from delivered narrow beam up to a maximum of 50 °.

BEAM OF PRIMARY OPTIC PASS
TROUGH OF TRANSPARENT SURFACE OF
THE FILTER
BEAM ANGLE 9°

LENS VECTOR ACTIVED CREATES THE
OPAL SURFACE SO THE BEAM OF
EMISSION BECOME BE DIFFUSED
MAX BEAM ANGLE 50°

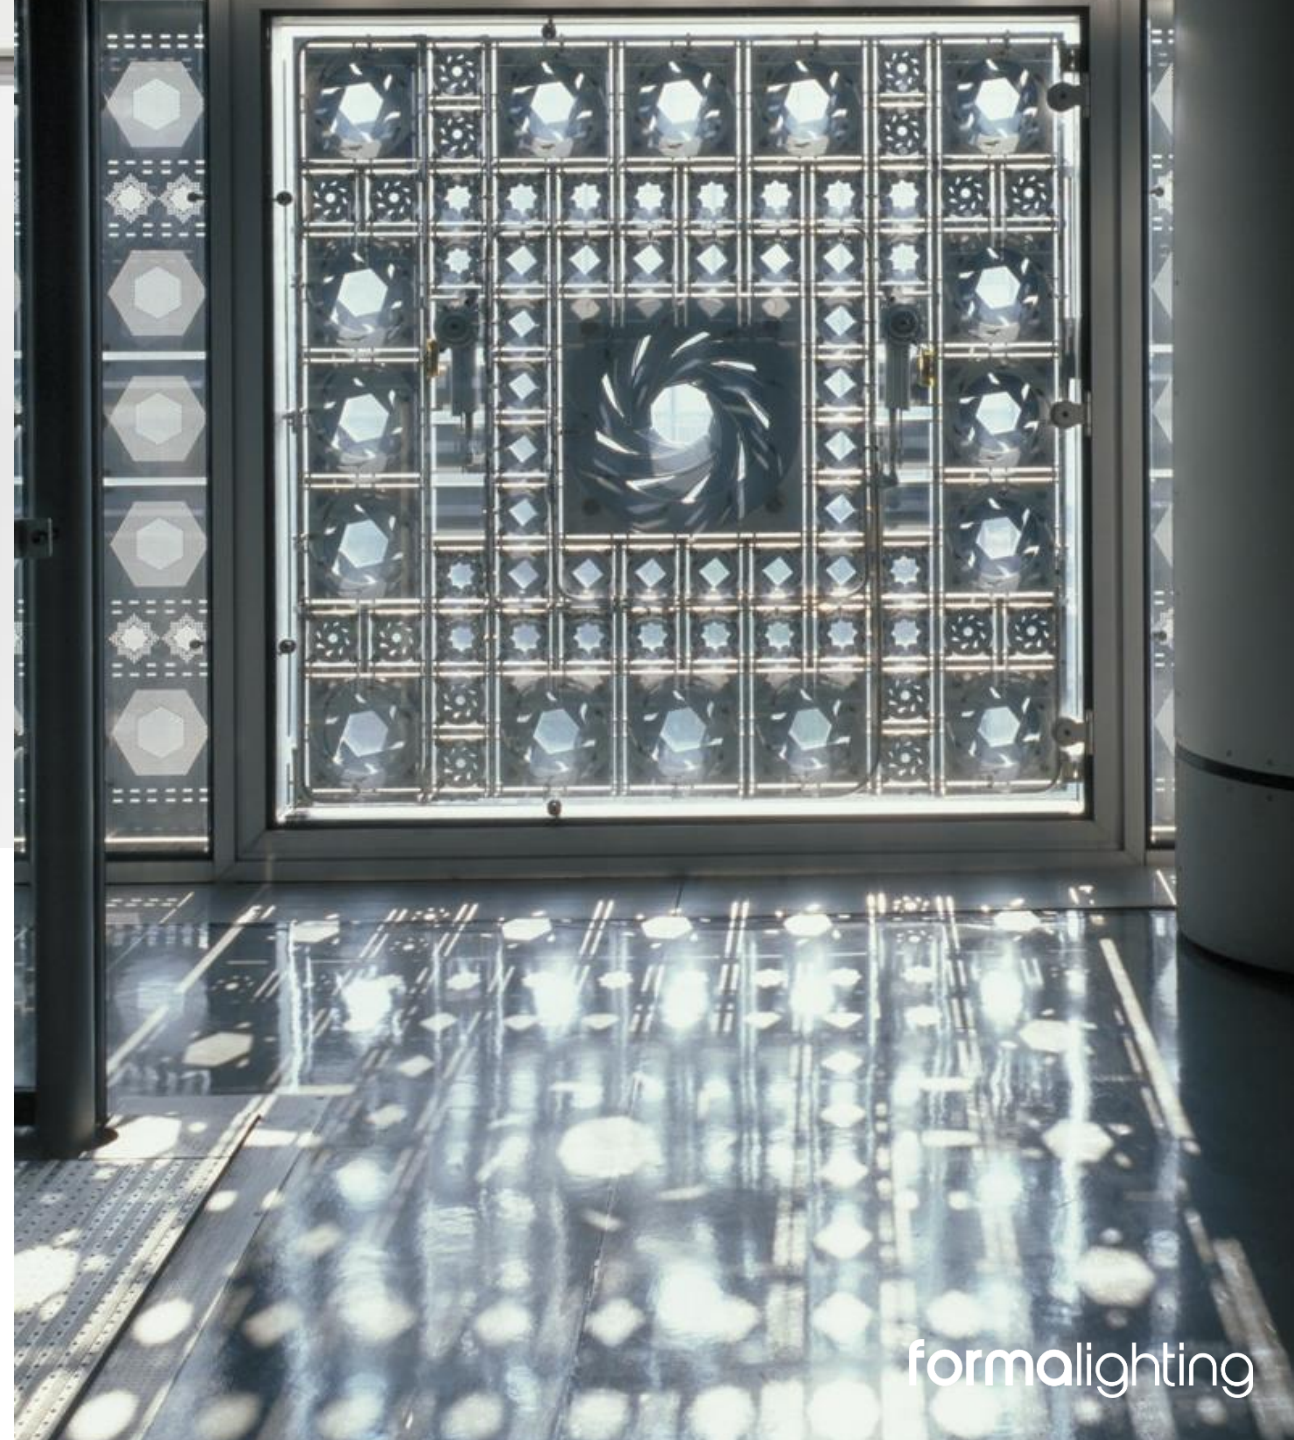

BEAM SHAPE

MECHANICAL MOTORISED ZOOM FORMALIGHTING's TECHNOLOGY

The small and versatile track fixture is available with a zoom optic, which enables users to focus on a wide to narrow spot at the touch of a button using the principal f iris diaphragm
